

## **FROM CONSERVATION ELEMENT:**

### **STORMWATER MANAGEMENT**

#### **Objective 2.1: [C] (Rev. Effective 12/7/99)**

By 2004, local government shall coordinate the various elements of their overall stormwater program through a unified plan to ensure the efficient and effective provision of stormwater regulations, enforcement, planning, maintenance, operations and capital improvements.

#### **IV-7 Conservation**

#### **Policy 2.1.1: [C] (Rev. Effective 9/19/91)**

By 1992, or within six months from receiving the final Water Management District Study, whichever occurs later, the local government shall adopt by ordinance and begin implementation of a watershed approach to water resource protection. This will result in the implementation of a single comprehensive stormwater management plan, which, by 1995, results in improvements to water quality in degraded water bodies and maintenance of water quality in all other water bodies. The plan shall include but not be limited to streambank and shoreline buffers, preservation of natural vegetation, design and maintenance standards for on-site management systems, retrofit of existing developments not in compliance with the Comprehensive Plan. As an interim measure, all design and water quality standards set forth in FAC 17-25 and 17-3 must be met as the required LOS for stormwater quality. The LOS for flooding must also be met as required in the Stormwater Sub-Element of the 2010 Comprehensive Plan.
